

STATEMENT OF WORK (SOW)

Somnath Creation - Stock Management System (SSM)

1. PROJECT OVERVIEW

Project Title: Somnath Creation Stock Management System - SSM

Client Name: Vijay Bhai

Project Duration: 10 Weeks (2.5 Months)

Objective: Develop a comprehensive web & app-based stock management system that tracks the complete manufacturing workflow from raw fabric procurement to finished goods, enabling real-time visibility of inventory at every production stage without financial transaction management.

2. SCOPE OF WORK

A. Master Data Management

- Design Master: Manage designs with fields for name, color, category, fabric type, and image upload. Auto-generate design codes and manage previews.
- Category Master: Manage product categories and link them to designs for filtering and reporting.
- Fabric Master: Track fabric types (meter-wise or lot-wise) and specifications.
- Factory Masters: Manage Embroidery, Stitching, and Zarkan factory details (name, contact, address, etc.).

B. Inventory Management Modules

- Fabric Inward: Record and track fabric lots, auto-generate lot numbers, and print inward receipts.
- Embroidery Process: Issue challans, track fabric lots, and record embroidery inward with rejection tracking.
- Stitching Process: Manage stitching challans, inward tracking, and stock updates.
- Zarkan Process: Track stitched garments, receive finished goods, and update final stock in godown.

C. Reporting & Analytics

Includes 10+ standard reports like stock summary, factory outstanding, challan status, daily movement, and analysis reports. Dashboard with real-time stock, WIP, alerts, and visual graphs.

D. Additional Features

- Search & Filter functionality across all modules
- Export reports to Excel/PDF with custom date range
- Professional challan printing with barcode/QR (optional)
- Role-based User Management and activity logs
- Data validation, stock availability checks, and overdue challan alerts

3. TECHNICAL SPECIFICATIONS

Architecture: Web-based & Mobile application accessible via browsers and app.

Deployment: On-premises (as per client requirement).

Technology Stack:

- UI/UX: Figma
- Backend: Python or Node.js/Express
- Database: PostgreSQL
- Frontend: React.js
- Mobile: Flutter

Project Notes:

- Work will be performed parallelly by the Flexion Infotech team.
- Client is responsible for any premium API or third-party tool costs.
- Project timelines depend on timely feedback and approvals from the client.

Thank You for Trusting Flexion Infotech!
